Real-Time DSP, Easy LAN Control With Comprehensive GUI

- Up to 6GHz, Standard
- Frequency: 1MHz - 400MHz
- Time Interval Resolution: 40pS
- IEEE488.2 and USBTMC Compliance

BNC**model****1105 - G**

A new counter, Model 1105-G, from Berkeley Nucleonics compares favorably to existing counters. The 1105-G has 12 digits of frequency resolution and 40 ps of time interval resolution. The real-time DSP front-end facilitates faster measurement throughput.

We have made the front panel controls more user-friendly. The SCPI software commands are compatible with the most commonly-used counters so you do not have to rewrite your software. Our LAN control feature lets you control one or several 1105-G's from your computer with displays of the control or measurement function you want.

Impressive 12 Digits Resolution & 6 GHz Frequency Measurements

The Model 1105-G includes a RF Channel 3 with a range from 375 MHz to 6GHz and standard Channels 1 & 2 from 1 MHz to 400 MHz. Up to 20 frequently-used setups may be stored in memory. Our design features full front-end isolation.

Packed with Many New Features

The BNC Model 1105-G, ISO 9001 compliant, gives users of existing counters all the measurement capability they are used to, with a few exciting new features. Features include Frequency & Ratio (11 digits/sec.), Time interval, Period (2.5 ns to 1000s), Duty Cycle, Pulse Width, Rise/Fall Time, Peak Volts (100 Hz~300 MHz), Phase, Totalize, with a time base temperature stability of < 1 PPM and aging rate of < 2 PPM per year. We can also measure the peak voltage of incoming waveforms as well.

The BNC Model 1105-G offers built-in statistics and math functions. Users can measure and display mean, min/max, delta & standard deviation. These apply to period, frequency, time interval, risetime and peak voltage measurements. Scale & offset can be easily used in compensating for systematic occurrences.

All functions are controlled by either the front panel or via remote control. USB and GPIB control is standard; Data logging to a spreadsheet is easily accomplished with included software (PC Compatible). Of interest is the Ethernet connectivity via your LAN, using your IP address. You can control and display the parameters of several 1105-G's from your local computer.

Fast Measurement & Special Applications

In addition to the real-time DSP (digital signal processing) technology, which increases the measurement speeds, a Limit Mode allows users to set margins according to their specific measurements. Go-NoGo commands can be issued via the USB. You may control what happens when a limit is exceeded eg. store current data, stop measuring and generate an output signal to trigger an external device.

Handy Software & Familiar SCPI Commands

Users can obtain data logs in Excel via USB or via an GPIB interface. Our web-support mode allows the 1105-G to be connected to your office LAN. Users simply call up an Ethernet address (Default: 192.168.0.247) on a local web browser to access and control the Model 1105-G. We also provide SCPI commands that are compatible with other manufacturers (Agilent 53132A, etc)

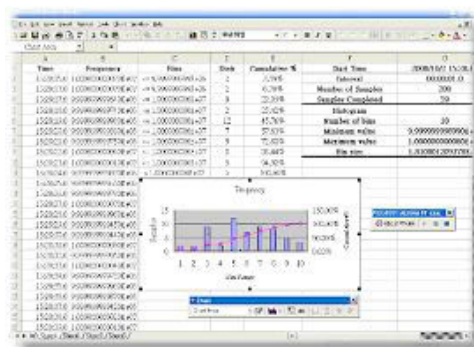

BNC

model

1105 - G

Signal Input Range		LVTTTL and TTL compatible	
Timing Restrictions			
Pulse Width		> 50 ns	
Transition Time		< 250 ns	
Start-to-Stop Time		> 50 ns	
Damage Level		12 Vrms	
External Arm Input Characteristics			
Impedance		1 kΩ	
Input Capacitance		17 pF	
Start Slope		Positive or Negative	
Stop Slope		Positive or Negative	
Notes		1. External Arm is available for all measurements except Peak Volts. 2. External Arm is referred to as External Gate for some measurements.	
Internal Time Base Stability			
		Standard (0° to 50°C)	High Stability Oven (1105-opt01)
Temperature Stability (referenced to 25°C)		± 1 x 10E-6	± 5 x 10E-9
Aging Rate	Per Day	± 2 x 10E-6	± 8 x 10E-10
	Per Month		
	Per Year		± 8 x 10E-8
Turn-on stability vs. time (30 min.)			± 2.0 x 10E-8 (referenced to 24 hours)
Calibration		Electronic	Electronic
External Time Base Input Specifications			
Voltage Range		200 mVrms to 10 Vrms	
Damage Level		12 Vrms	
External Time Base Input Characteristics			
Threshold		0 V	
Impedance		1 kΩ	
Input Capacitance		25 pF	
Input Frequency		10 MHz	
Internal vs. External Time Base Selection	Manual	Select Internal or External	
	Automatic	Internal used when External not present (default)	
Time Base Output Specifications			
Output Frequency		10 MHz	
Voltage		570 mVpp (0 dBm), typical	
Impedance		50 Ω (typical), AC coupled	
Measurement Specifications			
Frequency, Period Channel 1 and 2		1 mHz to 400 MHz (2.5 ns to 1000 s)	
Trigger		Default setting is Auto Trigger at 50 %	
"Auto" Gate Time		0.1 sec	
STD CH 3		375 MHz to 6 GHz (0.166 ns to 2.6 ns)
