

Model 805-M Ultra-Agile Frequency Synthesizer

Features

- Small size flange-mount module
- CW and pulse modulation
- Low phase noise
- Multi-channel configurable / cascadable: Master-slave connection through 1 GHz reference loop-through
- Phase coherent

Applications

- System clock source
- Beamforming, MIMO receiver R&D
- Electronic Warfare
- Multi-channel phase-coherent configurations for radar signal generation and testing
- Spectroscopy

DEFINITIONS

- The specifications in the following pages describe the warranted performance of the instrument for 23 ± 5 °C after a 30-minute warm-up period (unless otherwise stated).

Min/Max: Parameter range that is guaranteed by product design, and/or production tested. Warranted performance specifications include guard-bands to account for the expected statistical performance distribution, measurement uncertainties, and changes in performance due to environmental conditions.

Typical: Expected mean values, not warranted performance.

INTRODUCTION

- The Model 805-M is a compact-size frequency synthesizer for the generation of accurate and stable frequency signal in both CW and pulse form, covering a frequency range of 100 kHz to 22 GHz, with a fast-switching time of 5 μ s, the output power of -40 to 25 dBm depending on the frequency. The phase noise at 1 GHz and 20 kHz offset is -132 dBc/Hz, and the subharmonics and spurious lower than -55 dBc. The frequency setting resolution is 10 mHz and for the power 0.5 dB.

The synthesizer is excellently shielded and in a very compact flange-mountable form of 134 x 95 x 25 mm, weighs lighter than 0.5 kg, and consumes barely 17 W and therefore passively cooled. It features ETHERNET communication port for local and remote connection to a PC for control over GUI software or SCPI commands.

The module features external reference support of 100 MHz and 1 GHz. Multiple units can be connected, with one unit acting as the master and the others as slaves, to implement multi-channel PHASE-COHERENT sources. The Master reference frequency of 1 GHz is generated once in the master unit and looped through all the slave units. The phase coherence reached is about +/- 0.5 degree over 10 hours when all the channels are set to 5 GHz.

The product is suitable for many applications: as system clock source, in the multi-channel phase-coherent configurations for radar, beamforming, quantum computing, etc. The feature combination of phase coherence and fast switching allows also for applications in Electronic Warfare field.

Installation Instructions

The module relies on passive cooling. It is mandatory to mount the device on a heatsinking surface. Make sure the synthesizer operates under the conditions specified in this datasheet. Otherwise, the thermal protection will turn off the RF output.

CONNECTORS

1. DC IN	KPIX-4S (Kycon)	DC input (see also chapter “Power Connector Assembly”)
2. ETH	RJ-45	Ethernet port
3. REF IN	SMA	Reference Signal Input
4. TRIG	SMA	Trigger Signal Input
5. RST	Button	Reset Button
6. REF OUT	SMA	Reference Signal output

Power Connector Assembly

The PIN	ASSIGNMENT
1	GND
2	DC Supply (see also “Power requirements”)
3	GND
4	DC Supply (see also “Power requirements”)

The power connector is a 4 pin, snap and lock receptacle. BNC recommends Kycon manufactured plugs KPPX-4P from its KPPX series.

Reset Functionality

The reset functionality of the device can be used if the device has a wrong configured IP address and cannot be found in the local area network anymore. While pressing the reset button (>2 s), the device will be reconfigured to auto IP addressing mode (DHCP/Zero-conf) and restarts itself. After the device is up and running again, it gets a new IP address and can be discovered by the BNC Signal Generator UI.

ORDERING INFORMATION

HOST MODEL	PRODUCT	DESCRIPTION
805-M	805-M	22 GHz wideband frequency synthesizer module

GENERAL CHARACTERISTICS

Remote Programming Interfaces:

Ethernet

Control language: SCPI Version 1999.0

Power requirements: 24±6 VDC; 17 W maximum

Mains adapter supplied: 100-240 VAC in / 24 V, 2.7 A DC out

Storage temperature range: – 40 to 70 °C

Operating temperature range: 0 to 45 °C; non-condensing

Operating and storage altitude: up to 15,000 feet

 Safety/EMC complies with applicable Safety and EMC regulations and directives.

Recommended calibration cycle: 24 months
